SWOT Analysis

Strengths	Weaknesses
• Detect more aspects than others, including moisture, temperature, color, and pH level • AI powered to help diagnose and provide insights into appropriate actions • Help track data over time	• Lack medical personel • Sensors are still unable to detect some aspects, such as biological markers, bacteria, virus, glucose, and blood
Opportunities	**Threats**
• Market for smart health devices, particularly those related to baby care, is rapidly expanding • AI market is expanding • Growing awareness of the importance of early health monitoring	• potential competition from established brands in the baby care industry • Regulatory challenges around medical devices and health data privacy • the rapid pace of technological advancements

AI Specifications

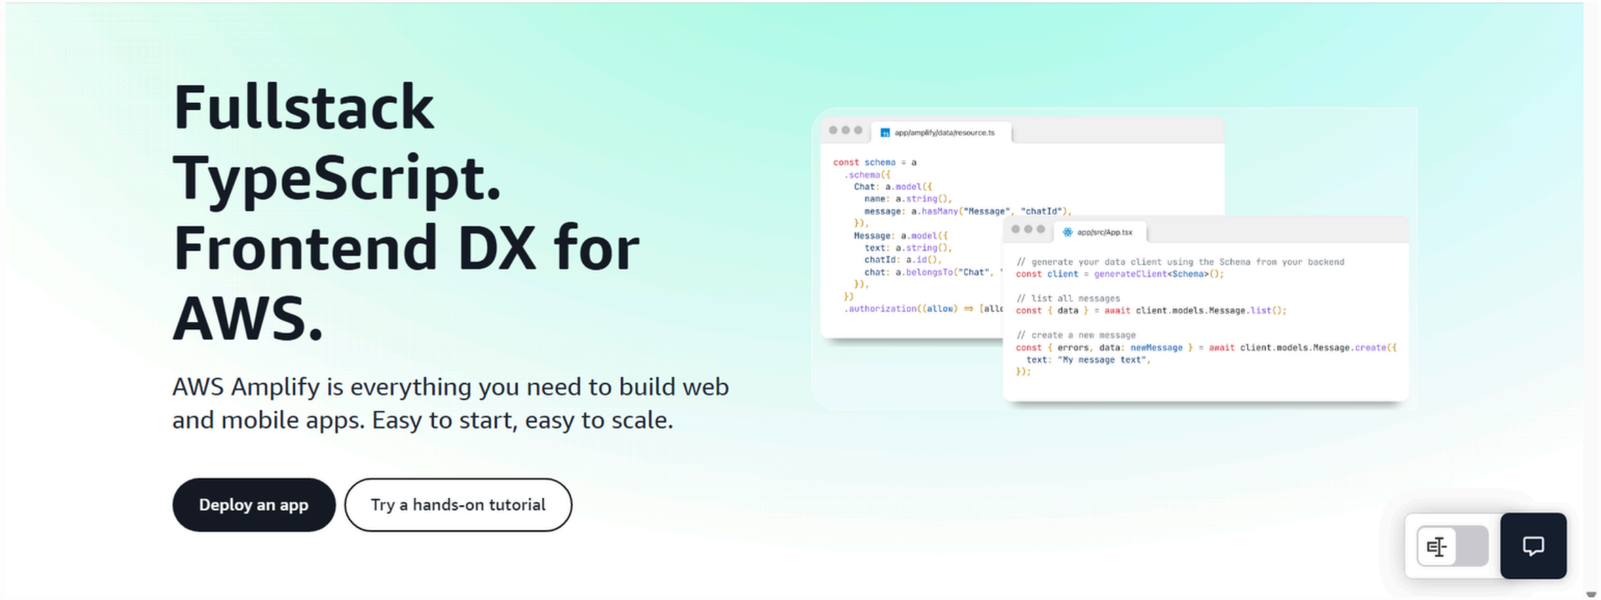

Ada Health

- Founded in 2011 by Dr. Claire Novorol, Professor Martin Hirsch, and Daniel Nathrath
- Specializes in health information technology, offering mobile health solutions, clinical decision support systems, and artificial intelligence applications in healthcare
- Collaborates with healthcare systems, providers, insurers, and life sciences companies

Claude AI

- Founded in 2021 by former OpenAI employees
- Large language models (LLMs)
- Generate human-like text and assist in various tasks, such as answering questions
- Demonstrated significant improvements in benchmarks, particularly in coding, multistep workflows, chart interpretation, and text extraction from images

Deploying Application

AWS Amplify

Frontend Development:
Amplify offers pre-built, themeable, and responsive UI components for frameworks like React, Angular, Vue, and more, accelerating the creation of cloud-connected user interfaces

Backend Services:
Developers can configure scalable backends featuring real-time data, authentication, storage, and serverless functions, all manageable through a code-first approach using TypeScript

Hosting and Deployment:
Amplify provides fully managed continuous integration and continuous deployment (CI/CD) workflows, allowing for rapid and secure hosting of both static and dynamic applications

Revenue Model

Revenue Per Customer:
Diaper Revenue: $110 per customer per month (recurring subscription).
Chip Revenue: $50 per new customer (one-time purchase every 6 months, equivalent to $8.33 per month).

Customer Growth:
Month 1: 100 customers.
Months 2–5: 30 new customers per month.
Month 6 onward: Viral coefficient of 1.15 applied to accelerate customer acquisition.

Total Revenue:
Calculated as the sum of diaper revenue (based on total customers) and chip revenue (based on new customers only).
Example: In Month 6, 253 customers generate $27,830 in diaper revenue and $1,650 in chip revenue, for a total of $29,480.

Costs of Goods Sold

Diaper COGS:
210 diapers per customer per month × $0.15 per diaper = $31.50 per customer per month.

Chip COGS:
$15 per chip (one-time cost every 6 months, equivalent to $2.50 per month per new customer).

Total COGS Per Customer:
$31.50 (diapers) + $2.50 (chip) = $34.00 per customer per month.

Operating Costs
Fixed Costs:
Salaries, rent, utilities, and other operational expenses total $100,917 per month.
Variable Costs:
Marketing and customer acquisition costs scale with customer growth.
Example: Marketing salaries and benefits start at $11,770 per month and increase as the team grows.

Breakeven and Profitability Month Analysis

Key Metrics and Assumptions

1. Monthly Revenue Per Customer:
   - Diaper revenue: $110 per customer per month.
   - Chip revenue: $50 one-time purchase every 6 months (averages to $8.33 per month).
   - Total revenue per customer per month: $118.33.
2. Cost of Goods Sold (COGS):
   - Diaper COGS: $31.50 per customer per month.
   - Chip COGS: $2.50 per customer per month.
   - Total COGS per customer per month: $34.00.
3. Contribution Margin Per Customer: Contribution Margin = Revenue per Customer − COGS per Customer =118.33 − 34 = $84.33 per customer per month
4. Fixed Operating Costs:
   - Monthly fixed costs (e.g., salaries, rent, marketing, etc.): $100,917.
5. Break-Even Formula:
   - Break-even customers: Break-Even Customers = Fixed Costs / Contribution Margin per Customer
   - Break-even revenue = Break-Even Customers x Revenue per Customer

Break-Even Customers = 100,91784.33 ≈ 1,197 customers
Break-Even Revenue = 1,197 × 118.33 ≈ 141,533 per month

Conclusion:
From the cumulative revenue breakdown table:

- By Month 17, the customer base reaches 1,175 customers, generating $139,470 in total monthly revenue (close to break-even but not profitable yet).
- By Month 18, the customer base grows to 1,351 customers, generating $160,360 in total monthly revenue, which exceeds the break-even revenue of $141,533.

LTV to CAC Ratio Calculation

Month 6 Example Calculation

Long Term Value of a Customer

- **Monthly Revenue per Customer:** $126.67.
- **Monthly COGS per Customer:** $36.50.
- **Monthly Gross Profit per Customer:** $126.67 - $36.50 = $90.17.
- **Customer Lifetime:** 24 months.
- LTV = $90.17 × 24 months = **$2,164.08**

Cost of Acquiring a New Customer

- **$21,120.83** from the costs of hiring a marketing associate and manager)
- **33 new customers** from the growth assumptions of our model (1.15 viral coefficient)
- $21,120.83/33 customers = **$640.63**

LTV:CAC Ratio is $2,164.08 to $640.63 which is 3.38 : 1

Valuation Breakdown

Our valuation is based on a 3x revenue multiple, a common benchmark for high-growth consumer technology products.

Pre-Money Valuation Calculation

- Projected Revenue: $2.7 million
- Revenue Multiple: ~3x
- Pre-Money Valuation:2.7M×2.96=8M

Fundraising Terms

- Investment Sought: $2 million
- Equity Offered: 20%

Post-Money Valuation

- Post-Money Valuation: 8M+2M=10M

Summary

- Pre-Money Valuation: $8 million
- Investment Round: $2 million
- Equity Offered: 20%
- Post-Money Valuation: $10 million
